

This test cover information we covered from the first 2 units. Choose the best answer.

Unit 1: Communication/Network Protocols

- 1) The OSI reference model was developed by the
 - a) ISO
 - b) IOS
 - c) OSI
 - d) OUI
- 2) Which OSI layer provides flow control and error handling?
 - a) 1
 - b) 2
 - c) 4
 - d) 7
- 3) SMTP is used to transfer _____ and attachments from a sending computer to a receiving computer.
 - a) e-mail clients
 - b) file datagrams
 - c) e-mail messages
 - d) management processes
- 4) The _____ layer of the OSI reference model allows two applications on different computers to open, use, and close connections.
- 5) Which protocol provides an interface and services for file transfer between computer across the internet?
 - a) File Transfer
 - b) Hyper Text Transfer
 - c) Simple Mail Transfer
 - d) Simple Network Management

Unit 2: Network Types

- 6) The two most common types of physical networks are Bus and Ring.
 - a) True
 - b) False
- 7) A LAN (local area network)
 - a) covers a geographical area the size of a town or city.
 - b) is usually confined to a single building or group of buildings.
 - c) is a geographically dispersed network that can cover across a country or worldwide.
 - d) All the above.
- 8) _____ topology is bound to network protocols.
- 9) The way information is passed through the network is the logical topology.
 - a) True
 - b) False
- 10) _____ allows two-way audio and video transmissions between two or more locations.
